7 STEPS TO create a custom GPT

Creating a custom GPT can be a game-changer and usually takes about two hours to complete. The time you invest now will pay off with significant time savings and increased efficiency. This guide will walk you through each step to ensure you get the most out of your custom GPT. In steps 1-5 you will gather information needed to implement your GPT. Steps 6-7 are implementation and revision.

Please note, you will need a paid version of ChatGPT to create custom GPTs. Once you have a paid version access the GPT builder by clicking Explore GPTs and then clicking + Create in the top right corner.

1. Think Like a Boss

Make a list of your regular tasks. Where can you delegate to free up your time for more complex projects? The best types of projects for custom GPTs are text heavy and regularly occuring. Identify a project for your GPT.

2. Set the Stage

Provide context for your GPT. Gather your organization's mission statement, brand promise, and the goals of this specific effort. Detail what success looks like for this project and the call to action.

3. Define Your Ideal Audience

Describe your target audience in detail. If you have multiple segments, detail each one. Include demographic, psychographic, and behavioral data. Mention what motivates them (such as results learned from A/B testing). If you have personas, include them.

4. Show Off Your Best Work

Gather your most successful samples and analyze what makes them great. Is it the audience response (Open Rate, CTR), positive feedback from your boss, or something else? Prepare these examples as a PDF, along with your notes on their success. This provides the GPT with examples of the desired deliverable.

5. Highlight Your Voice

Since GPTs mimic language, show it how you talk. Include your brand's tone and message platform. If you're unsure about your brand's tone, use a piece of writing that exemplifies your brand's tone and ask ChatGPT to analyze the tone for you.

6. Build Your Custom GPT

Input all the information from the steps above into your custom GPT. Define the deliverables you want the GPT to produce and decide on a prompt question for others to use. ChatGPT's GPT builder will guide you through the process of inputing your information and allow you to upload your PDF files.

7. Test and Refine

Test your custom GPT with a real scenario. Edit the output as needed and refine the GPT accordingly. Consider specifying words and phrases you don't want the GPT to use during the editing process.
